GitScope AI REPOSITORY INTELLIGENCE REPORT

Automated Commit History, Developer Velocity & Security Risk Audit

test-user/my-simple-app

Branch: main • 10/23/2026

1. Executive Summary

4	1	+340	-28
TOTAL COMMITS	ACTIVE CONTRIBUTORS	LINES ADDED	LINES DELETED

Analyzed 4 commit(s) by 1 contributor(s) on branch "main" (test-user/my-simple-app).

2. Developer Contributions

DEVELOPER / AUTHOR	COMMITS	LINES ADDED (+)	LINES DELETED (-)
test-user	4	+340	-28

3. Commit Type Classification

CONVENTIONAL TYPE	COMMIT COUNT	DISTRIBUTION PERCENTAGE
FEAT	3	75%
FIX	1	25%

4. Frequently Modified Files

FILE PATH	CHANGE COUNT	ACTIVE CONTRIBUTORS
src/index.ts	140	test-user
src/utils.ts	85	test-user
package.json	15	test-user

5. Security & Risk Analysis

CLEAN AUDIT: Zero hardcoded secrets, security vulnerabilities, or anti-patterns detected.

6. Collaboration & Overlap Insights

SINGLE CONTRIBUTOR: Zero overlapping edit conflicts or merge contentions identified.

7. Audit Methodology & Limitations

- Generated via GitHub REST API with read-only scopes. Real-time deterministic analysis without persistent code blob storage.
- Commit metrics reflect history at generation time; squash merges or rebase workflows may consolidate individual commit records.
- Risk findings are heuristic indicators designed for developer review and should be verified prior to remediation.
